

T436 "Film look" Scene Fragment exercise #2 (10 points):

You will shoot and edit a scene fragment that incorporates as much of the "film look" as possible (given the limited shooting conditions).

In the scene one person (or two) will interact with an object.

Examples include:

- One person can be walking and find an object
- One person can give the object to another
- Someone could steal the object from someone else

Requirements:

- Shoot in any HD format you want (but it will need to be converted to 1080i)
- Try to make it look as much like film as possible
- Use no more than 3-6 shots
- Output an Apple ProRes 1080i HQ Quicktime file called your username and place onto the T436 drop box before the start of Week 3's lab
- Write a critique (bring to the Week 3 lab) that explains what is going on in your scene fragment and critiques your work.
